HUBAM CLOVER SEED

Rockford, Minnesota.

Price list

Dear Sir:—

We have your request for information on growing **GINSENG** roots. The enclosed printed matter will give you this information, but if there are points not made clear you may feel free to write and we will try to give you the desired information.

The greater portion of those who ask for this information loose all interest in **GINSENG** as soon as they learn **GINSENG** must grow in partial shade and to get good quality **MATURE** roots takes six years. While this information scares out most people they are just the qualities we who are in the business like about **GINSENG**, for it means little competition, no over production, no clogging of market and ruination of prices. **GINSENG** is now the most profitable of all crops grown, we would not like to see some scientist develop a mutation or new variety **GINSENG** that could stand full sunshine or mature in a year or two.

Price of **GINSENG** seed is \$10.00 per pound of approximately 8000 seeds, stratified, kept properly moistened, ready to germinate first thing in the spring if planted about the same time garden vegetable seeds are planted or the fall before. On orders of three pounds or more we guarantee a germination of over 85% or make up the difference with more seed, free, the next planting season, provided of course that the information in the printed matter enclosed is carefully followed.

Yours truly,

Lake Sarah Specialty Farm
